The DRG database facilitates discovery and use of resources relevant to drug abuse research. The database and associated tools were specifically created to provide data that is contained in tables, figures, and supplementary materials from published papers. Users can find the effects of a particular drug, strain, or knock out on a gene or brain region.

Publish your data at NIF via the DRG. It’s as easy as sending a spreadsheet. Find out how at http://neuinfo.org/products/DRG

Your data becomes searchable on the web. “I forgot I studied that gene ...” - NIDA Researcher

PubMed links back to DRG via LinkOut

DRG data is automatically searched with each NIF query.

DRG is funded by an ARRA supplement to the NIF contract by the National Institute of Drug Abuse (NIDA).

Innovation Through Integration
