Proper Citation: Precursors of Premature Disease and Death (RRID:SCR_010483)

Description: Data set of annual questionnaires of a long-term prospective study of 1,337 former Johns Hopkins University medical students to identify precursors of premature cardiovascular disease and hypertension. The purpose of the study has broadened, however, as the cohort has aged. The study has been funded for 15 years. Participants were an average of 22 years of age at entry and have been followed to an average age of 69 years. Data are collected through annual questionnaires, supplemented with phone calls and substudies. Self-reports of diseases and risk factors have been validated. Every year from 1988 to 2003, anywhere from 2 to 6 questionnaires have been administered, in categories such as the following, which repeat periodically: Morbidity, Supplemental Illness, Health Behavior, Family and Career, Retirement, Job Satisfaction, Blood Pressure and Weight, Medications, Work Environment, Social Network, Diabetes, Osteoarthritis, Health Locus of Control, Preventive Health Services, General Health, Functional Limitations, Memory Functioning, Smoking, Religious Beliefs and Practices, Links with Administrative Data, National Death Index searches for all nonrespondents * Dates of Study: 1946-2003 * Study Features: Longitudinal * Sample Size: 1,337 (1946)

Abbreviations: Precursors of Premature Disease and Death

Resource Type: data or information resource, data set

Keywords: questionnaire, longitudinal, precursor, morbidity, illness, health, behavior, family, career, retirement, job satisfaction, blood pressure, weight, medication, work environment, social network, preventive health services, functional limitation, memory, smoking, religion, death, adult human, early adult human, middle adult human, late adult human

Related Condition: Aging, Cardiovascular disease, Hypertension, Diabetes, Osteoarthritis

Funding: NIA
