Comments: Caution: Often called PLC8024 in Chinese literature probably because of a concatenation between PLC/PRF/5 and ATCC-8024., Karyotypic information: Has lost chromosome Y., Virology: Susceptible to infection by adenovirus types 40 (Ad40) and 41 (Ad41) (PubMed=1317878)., Virology: Contains at least 7 copies of integrated hepatitis B virus (HBV) genomes. Secretes hepatitis virus B surface antigen (HBsAg) but no other HBV proteins (PubMed=6302689; PubMed=6317496)., Population: African; Shangaan., Part of: MD Anderson Cell Lines Project., Part of: Liver Cancer Model Repository (LIMORE)., Part of: JFCR45 cancer cell line panel., Part of: Cancer Dependency Map project (DepMap) (includes Cancer Cell Line Encyclopedia - CCLE).
