pKK-TEV-EGFP

RRID:Addgene_105793

Type: Plasmid

Proper Citation

RRID:Addgene_105793

Plasmid Information

URL: <http://www.addgene.org/105793>

Proper Citation: RRID:Addgene_105793

Bacterial Resistance: Ampicillin

Defining Citation: [PMID:29590189](#)

Vector Backbone Description: Backbone Marker:Invitrogen; Vector Backbone:pcDNA5/FRT/TO; Vector Types:Mammalian Expression, Flp-In competent; Bacterial Resistance:Ampicillin

Comments: This vector is a member of the pKK vector family. Its cloning site was optimized for the SLIC approach, however, a traditional restriction and ligation based approach is also possible (see Szczesny RJ et al. for detailed protocols; bioRxiv, doi: <https://doi.org/10.1101/160101>). This vector is a derivate of the pcDNA5/FRT/TO plasmid (Invitrogen) and is suitable for stable cell line generation using the Flp-In system. Transcription of the gene of interest is driven by a tetracycline responsive CMV promoter. A given coding sequence can be cloned into all pKK vectors using just three universal PCR primers and a ligation-independent DNA cloning method. Enhanced green fluorescent protein (EGFP) is a mutant of wild-type GFP with humanized sequence and mutations (F64L, S65T) that improve its spectral properties (PMID: 8805248). EGFP is not truly monomeric in contrast to mEGFP (a property conferred by the A206K mutation, PMID: 11988576, PMID: 22869113).

Plasmid Name: pKK-TEV-EGFP

Record Creation Time: 20220422T221513+0000

Record Last Update: 20260912T091419+0000

Ratings and Alerts

No rating or validation information has been found for pKK-TEV-EGFP.

No alerts have been found for pKK-TEV-EGFP.
