Vector Backbone Description: Vector Backbone:See supplemental files for plasmid details; Vector Types:; Bacterial Resistance:None

Comments: Strain can be grown on LB without antibiotics. Resistant to: ampicillin, chloramphenicol, florfenicol, gentamicin, kanamycin, nalidixic acid, streptomycin, spectinomycin, sulphonamides, tobramycin, tetracycline, trimethoprim Please note that plasmids are stable in the absence of antibiotic selection. 39R861+ is resistant to nalidixic acid due to a chromosomal mutation. The remaining resistance determinants are plasmid-borne. 39R861+ contains six plasmids, outlined in the supplemental files.
