Vector Backbone Description: Vector Backbone:YK 02 mCh SspB; Vector Types:Mammalian Expression; Bacterial Resistance:Ampicillin

Comments: This plasmid is the empty vector version of a plasmid that would typically encode a protein fused to SspB. SspB will bind to iLID upon exposure to blue light. We used it to test for light inducible condensate formations using a scaffold protein (FTH1) bound to iLID which was expressed off a separate plasmid.
