Proper Citation: SPH Biorepository (RRID:SCR_004551)

Description: Established in 2004, SPH Biorepository was built to create a centralized facility for many research programs, as well as for new ones; more effective use of the available storage space; development of new database management tools; and quality control of sample processing and banking. While maintaining ultimate control of the samples accumulated in their research projects, PIs will have the assurance of competent handling of their biological samples, reliable access, safe storage, and expert advice from the Biorepository personnel. In the long-term, the Biorepository will provide: * Safe and orderly storage of banked samples * Samples diversification in case of a major disaster *Leverage for additional funding for the new projects Over 145,000 thousands of various biological and environmental samples have been stored and archived through the CHAMACOS, Vitamin, FACES, IBD, and other projects. The Biorepository (Holland - Director) has accumulated substantial expertise in the development of customized databases to barcode and monitor sample location, transfer, and use.

Abbreviations: SPH Biorepository

Synonyms: UC Berkeley Biorepository, School of Public Health Biorepository

Resource Type: material resource, biomaterial supply resource, tissue bank
