Proper Citation: Tissue Banks International - TBI (RRID:SCR_005041)

Description: TBI/Tissue Banks International is a non-profit network of medical eye and tissue banks dedicated to the relief of human suffering through transplantation. More than 100,000 patients are treated with TBI tissue annually. TBI is a recognized innovator in the field of eye and tissue banking and has led advancements in recovery, processing, and distribution of allograft tissue. Each person who chooses to become an eye and tissue donor can help more than a dozen people through their gift. Sight can be restored with a cornea, mobility enabled with a ligament, pain eased with a spinal implant made of bone, burns treated with skin, and lives saved with heart valves. The largest provider of ocular tissue in the world, TBI started as a single eye bank in 1962, and has grown to a network that covers the United States and reaches around the globe. Each year, more than 130,000 TBI tissues are used in transplant surgery, with thousands more utilized in research and medical education.
