RxNorm

RRID:SCR_006645

Type: Tool

Proper Citation

RxNorm (RRID:SCR_006645)

Resource Information

URL: http://www.nlm.nih.gov/research/umls/rxnorm/

Proper Citation: RxNorm (RRID:SCR_006645)

Description: Ontology that provides a normalized naming system for generic and branded drugs and a tool for supporting semantic interoperation between drug terminologies and pharmacy knowledge base systems. It contains the names of prescription and many over-the-counter drugs available in the United States and links its names to many of the drug vocabularies commonly used in pharmacy management and drug interaction software. It can mediate messages between systems not using the same software and vocabulary. * RxNorm Download Files - contain data consistent with the 2013AB UMLS Metathesaurus Release Files. * RxNorm API - web service for accessing the current RxNorm data set. * RxNorm Browser (RxNav) - a browser for several drug information sources, including RxNorm, RxTerms and National Drug File - Reference Terminology (NDF-RT). * Current Prescribable Content - subset of currently prescribable drugs found in RxNorm. * RxTerms Drug Interface Terminology - a drug interface terminology derived from RxNorm for prescription writing or medication history recording

Abbreviations: RxNorm

Synonyms: Rx Norm

Resource Type: data or information resource, controlled vocabulary, ontology

Defining Citation: PMID:22426081

Keywords: umls, drug, pharmacy, clinical, drug pack, medicine, unique identifier, prescribable drug, web service, metathesaurus, generic drug, branded drug, data set, web service, database
