Proper Citation: AutismKB (RRID:SCR_006937)

Description: Genetic factors contribute significantly to ASD. AutismKB is an evidence-based knowledgebase of Autism spectrum disorder (ASD) genetics. The current version contains 2193 genes (99 syndromic autism related genes and 2135 non-syndromic autism related genes), 4617 Copy Number Variations (CNVs) and 158 linkage regions associated with ASD by one or more of the following six experimental methods: # Genome-Wide Association Studies (GWAS); # Genome-wide CNV studies; # Linkage analysis; # Low-scale genetic association studies; # Expression profiling; # Other low-scale gene studies. Based on a scoring and ranking system, 99 syndromic autism related genes and 383 non-syndromic autism related genes (434 genes in total) were designated as having high confidence. Autism spectrum disorder (ASD) is a heterogeneous neurodevelopmental disorder with a prevalence of 1.0-2.6%. The three core symptoms of ASD are: # impairments in reciprocal social interaction; # communication impairments; # presence of restricted, repetitive and stereotyped patterns of behavior, interests and activities.

Abbreviations: AutismKB

Synonyms: Autism Knowledgebase

Resource Type: production service resource, data or information resource, database, data analysis service, analysis service resource, service resource

Defining Citation: PMID:22139918

Keywords: gene, copy number variation, linkage region, genome-wide association study, family-based association study, case-control association study, expression profile, blast,

syndromic, non-syndromic, snp, vntr, bio.tools, FASEB list

Related Condition: Autism spectrum disorder, Autism

Funding: Merck ;
