Proper Citation: Helmholtz Center Munich Institute of Epidemiology (RRID:SCR_011285)

Description: The main aim of Epidemiology at the Helmholtz Zentrum Munchen is to examine the role of environmental factors and genetic predisposition on human health by the use of epidemiological methods. Research is conducted in cooperation with the Institute of Medical Information Processing, Biometrics and Epidemiology at Ludwig Maximilians University of Munich. The institute is organized in five research units: * Environmental Epidemiology * Epidemiology of Air Pollution Health Effects * Epidemiology of Chronic Diseases * Genetic Epidemiology * Epidemiology Biological Samples Genomics The institute runs several cohort studies with adult, school children and new-born study populations, as well as time series analyses, case control studies and family studies. Another goal is to provide infrastructure for epidemiological research. As a resource for future studies a collection of serum, plasma, DNA and an archive of EBV immortalized B-Lymphocytes is being established. International co-operation and qualification of our members is highly emphasized in this institute, there are co-operations with about 70 scientific institutes and universities in Germany and abroad. We would like to point to the co-operation with the Harvard School of Public Health (MPH-training of institute members, exchange of scientists) and with the US-Environmental Protection Agency (EPA) in Chapel Hill. Two thirds of the personnel is financed through external grants, which are provided by state ministries, federal institutions, the European Union and grant giving institutions in the United States of America.
