Description: Multifunction phosphorimager fluorimager laser scanner that collects fluorescent or storage phosphor images from gels, membranes and phosphor screens. It is equipped with blue (450 nm) and red (635 nm) lasers, can scan at resolutions down to 50 microns. It is able to quantify radioactive gels for commonly used isotopes such as ³²P, ³³P, ¹²⁵I, ³⁵S, and ¹⁴C. There are three detection modes: phosphor screen mode, red/blue fluorescence, chemifluorescence.
