Proper Citation: NCI Division of Cancer Control and Population Sciences SEER-Medicare Comorbidity SAS Macros (RRID:SCR_025810)

Description: Portal provides SAS Macros to calculate comorbidity weights. Used to assist SEER-Medicare investigators with their analyses. NCI recommends use of the 2021 macro. The 2014 and 2000 versions are provided for those needing to reproduce prior results. These macros offer the option of including Medicare hospital (MedPAR) claims only, or also considering physician (NCH) and outpatient claims. The Rule-Out option is recommended in the latter situation. Note that diagnoses using ICD-10 codes, starting in October 2015, are not included in the 2000 and 2014 macros. NCI does not accept responsibility for the completeness or accuracy of the codes and weights used in the macros. Investigators may modify the macros if they wish to include different diagnosis codes or condition weights.

Synonyms: SEER-Medicare Comorbidity SAS Macros

Resource Type: data or information resource, topical portal, disease-related portal, portal

Keywords: SAS Macros, calculate comorbidity weights, diagnosis codes, condition weights,

Availability: Free, Freely available

Resource Name: NCI Division of Cancer Control and Population Sciences SEER-Medicare Comorbidity SAS Macros

Resource ID: SCR_025810
