Description: The Brain Trauma Foundation (BTF) is a national non-profit organization dedicated to improving the outcome of traumatic brain injury (TBI) patients worldwide by developing best practices guidelines, quality improvement programs, conducting clinical research, and educating medical professionals and consumers. Our efforts also focus on public education aimed at increasing awareness and understanding of the symptoms of a concussion. Our goal is to better educate coaches, nurses, athletes, parents and all citizens about the importance of recognizing concussions and taking the appropriate steps to ensure people receive appropriate care. Also by educating healthcare professionals on the immediate care for coma patients, we estimate that thousands of lives could be saved each year in the U.S., millions worldwide, and more would be spared life-long disabilities. Research has proven that all brain damage does not occur at the moment of impact but rather evolves over the ensuing hours and days after the initial injury, due to brain swelling and inadequate oxygen and blood flow to the injured brain. In most cases, this secondary damage can be controlled by applying scientific, evidence-based diagnostic and treatment Guidelines, which BTF has developed with medical organizations and physicians with expertise in TBI. BTF offers updated continuing education activities for all levels of health care professionals caring for TBI patients. The online activities include recorded presentations, live web-based lectures, and interactive learning modules based on the latest scientific-evidence. Also available on the BTF Learning Portal is an online version of the EMS course developed in coordination with National Highway Traffic Safety Administration. The Brain Trauma Foundation leads the way in cutting-edge clinical research on Traumatic Brain Injury (TBI). Improving diagnosis and treatment of TBI requires a focus on clinical research. Our mission is to improve the outcome of TBI patients worldwide. BTF's research spans the spectrum from concussion to coma. BTF is conducting innovative research into the cause diagnosis of concussion. Also, BTF develops Best TBI Practice Guidelines, which when followed can significantly improve a patient's outcome. The Foundation is currently conducting studies and leading consortiums of investigators from multiple universities and disciplines in many TBI

research areas that will have immediate impact on patient outcomes.
