**Description:** Curated data set of gene expression data from 230 stage I-III breast cancers that were generated from fine needle aspiration specimens of newly diagnosed breast cancers before any therapy. The biopsy specimens were collected sequentially during a prospective pharmacogenomic marker discovery study between 2000 and 2008. These specimens represent 70-90% pure neoplastic cells with minimal stromal contamination. In the study, patients received 6 months of preoperative (neoadjuvant) chemotherapy including paclitaxel, 5-fluorouracil, cyclophosphamide and doxorubicin followed by surgical resection of the cancer.

Abbreviations: GSE20194

Resource Type: data or information resource, data set

**Keywords:** gene expression, chemotherapy, paclitaxel, 5-fluorouracil, cyclophosphamide, doxorubicin, adult human

Related Condition: Cancer, Breast cancer

Funding:

Availability: Free, Public

Resource Name: GSE20194

Resource ID: SCR\_003645

Alternate IDs: nlx\_157797

Record Creation Time: 20220129T080220+0000

Record Last Update: 20250429T054838+0000

### **Ratings and Alerts**

No rating or validation information has been found for GSE20194.

No alerts have been found for GSE20194.
