Proper Citation: Clinical Dementia Rating (RRID:SCR_003678)

Description: A numeric scale used to quantify the severity of symptoms of dementia (i.e. its stage). Using a structured-interview protocol, a qualified health professional assesses a patient's cognitive and functional performance in six areas: memory, orientation, judgment and problem solving, community affairs, home and hobbies, and personal care. Scores in each of these are combined to obtain a composite score ranging from 0 through 3. (Adapted from Wikipedia)

Abbreviations: CDR

Synonyms: Global CDR Assignment Based On Box Scores, Global Clinical Dementia Rating (CDR) Based on CDR Box Scores

Resource Type: assessment test provider, material resource

Keywords: memory, orientation, judgment, problem solving, community, hobby, personal care, late adult human

Related Condition: Dementia, Alzheimer's disease
