Proper Citation: SeqWright Biorepository (RRID:SCR_004657)

Description: THIS RESOURCE IS NO LONGER IN SERVICE, documented May 10, 2017. A pilot effort that has developed a centralized, web-based biospecimen locator that presents biospecimens collected and stored at participating Arizona hospitals and biospecimen banks. which are available for acquisition and use by researchers. Researchers may use this site to browse, search and request biospecimens to use in qualified studies. The development of the ABL was guided by the Arizona Biospecimen Consortium (ABC), a consortium of hospitals and medical centers in the Phoenix area, and is now being piloted by this Consortium under the direction of ABRC. You may browse by type (cells, fluid, molecular, tissue) or disease. Common data elements decided by the ABC Standards Committee, based on data elements on the National Cancer Institute"s (NCI"s) Common Biorepository Model (CBM), are displayed. These describe the minimum set of data elements that the NCI determined were most important for a researcher to see about a biospecimen. The ABL currently does not display information on whether or not clinical data is available to accompany the biospecimens. However, a requester has the ability to solicit clinical data in the request. Once a request is approved, the biospecimen provider will contact the requester to discuss the request (and the requester"s questions) before finalizing the invoice and shipment. The ABL is available to the public to browse. In order to request biospecimens from the ABL, the researcher will be required to submit the requested required information. Upon submission of the information, shipment of the requested biospecimen(s) will be dependent on the scientific and institutional review approval. Account required. Registration is open to everyone., documented on August 17, 2021. Convenient, cost-effective and reliable storage solutions including maintaining, storing and monitoring your biological samples. Avoid costly purchases of ultra-low temperature freezers, sample tracking LIMS, and layers of emergency back-up infrastructure. Enjoy peace of mind in the knowledge that your critical samples are safe, secure, and readily available to you. Service Features * Realtime sample tracking and monitoring, with 24/7 accessibility. * GLP compliant repository with cold chain of custody. * Numerous storage options, from ambient temperature to -170 degrees C. * Hazardous specimen storage capabilities. * Redundant emergency back-up systems. * Secure-access facility. * At Temperature back-up freezers. * Rapid domestic & international shipping. As a full-service contract genomics provider, SeqWright is able to offer our BioRepository customers the additional benefit of a broad portfolio of regulated services for testing of samples, as and when required, and then returning the samples back to our BioRepository for further storage. Contact us for your customized solution.
