Proper Citation: STOP (RRID:SCR_005322)

Description: STOP is a multi-ontology enrichment analysis tool. It is intended to be used to help from hypothesis about large sets of genes or proteins. The annotations used for enrichment analysis are obtained automatically applying text descriptions of genes and proteins to the NCBO annotator. Text for genes is found using NCBI entrez gene, and text for proteins is found using UniProt. The text is then run through NCBO annotator with all the available ontologies. For more information about the NCBO annotator please visit: <http://bioportal.bioontology.org/> The goal of National Center for Biomedical Ontology (NCBO) is to support biomedical researchers in their knowledge-intensive work, by providing online tools and a Web portal enabling them to access, review, and integrate disparate ontological resources in all aspects of biomedical investigation and clinical practice. A major focus of our work involves the use of biomedical ontologies to aid in the management and analysis of data derived from complex experiments. This work is an expansion of the work of Rob Tirrell and others on RANSUM This project would not be possible without the contributions of Emily Howe, Uday Evani, Corey Powell, Mathew Fleisch, Tobias Wittkop, Ari Berman, Nigam Shah and Sean Mooney An account is required.

Abbreviations: STOP

Synonyms: Statistical Tracking of Ontological Phrases, Statistical Tracking of Ontological Phrases (STOP)

Resource Type: analysis service resource, data analysis service, production service resource, service resource

Keywords: gene ontology, resource:go, gene, protein, annotation

Resource Name: STOP

Resource ID: SCR_005322

Alternate IDs: nlx_144382

Record Creation Time: 20220129T080229+0000

Record Last Update: 20260821T042648+0000

Ratings and Alerts

No rating or validation information has been found for STOP.

No alerts have been found for STOP.
