## [wFleaBase](#)

RRID:SCR\_006018

Type: Tool

### Proper Citation

wFleaBase (RRID:SCR\_006018)

### Resource Information

**URL:** <http://wfleabase.org/>

**Proper Citation:** wFleaBase (RRID:SCR\_006018)

**Description:** wFleaBase provides gene and genomic information for species of the genus *Daphnia* - commonly known as the water flea. It contains the genome of *Daphnia pulex* and other species, including bulk data files, and all gene pages, plus genomics tools including microsatellites, cDNA, Cosmid and BAC libraries, GSS and ESTs, and microarrays. It also contains maps of the *Daphnia* genome, and genome annotation tools. The freshwater crustacean *Daphnia* is a model system for ecology, evolution and the environmental sciences. The rapidly growing genomic data for this organism is stimulating interdisciplinary research to understand the complex interplay between genome structure, gene expression, individual fitness, and population-level responses to chemical contaminants and environmental change. wFleaBase includes data from all species of the genus, yet the primary species are *D. pulex* and *D. magna*, because of the broad set of genomic tools that have already been developed for these animals. A complete sequence for *Daphnia pulex* is now available at this site. Please observe this Data release policy. The data is a first characterization of the crustacean genome, which was made possible by the U.S. Department of Energy (DOE) Joint Genome Institute (JGI) in collaboration with the *Daphnia* Genomics Consortium (DGC) whose members were funded by the National Science Foundation. Category: Genomics Databases (non-vertebrate) Subcategory: Invertebrate genome databases

**Synonyms:** wFleaBase

**Resource Type:** data or information resource, database

**Keywords:** FASEB list

**Resource Name:** wFleaBase

**Resource ID:** SCR\_006018

**Alternate IDs:** nif-0000-03642

**Record Creation Time:** 20220129T080233+0000

**Record Last Update:** 20260829T182945+0000
