Unified Medical Language System

RRID:SCR_006363

Type: Tool

Proper Citation

Unified Medical Language System (RRID:SCR_006363)

Resource Information

URL: <http://www.nlm.nih.gov/research/umls/>

Proper Citation: Unified Medical Language System (RRID:SCR_006363)

Description: Database of key terminology, classification and coding standards, and associated resources to promote creation of more effective and interoperable biomedical information systems and services, including electronic health records. This set of files and software brings together many health and biomedical vocabularies and standards to enable interoperability between computer systems. Users can use the UMLS to enhance or develop applications, such as electronic health records, classification tools, dictionaries and language translators. The UMLS has three tools, which we call the Knowledge Sources: * Metathesaurus: Terms and codes from many vocabularies, including CPT, ICD-10-CM, LOINC, MeSH, RxNorm, and SNOMED CT * Semantic Network: Broad categories (semantic types) and their relationships (semantic relations) * SPECIALIST Lexicon and Lexical Tools: Natural language processing tools We use the Semantic Network and Lexical Tools to produce the Metathesaurus. Metathesaurus production involves: * Processing the terms and codes using the Lexical Tools * Grouping synonymous terms into concepts * Categorizing concepts by semantic types from the Semantic Network * Incorporating relationships and attributes provided by vocabularies * Releasing the data in a common format Although we integrate these tools for Metathesaurus production, you can access them separately or in any combination according to your needs. The UMLS Terminology Services (UTS) provides three ways to access the UMLS: Web Browsers, Local Installation, and Web Services APIs.

Abbreviations: UMLS

Synonyms: Unified Medical Language System (UMLS)

Resource Type: data access protocol, data or information resource, database, international standard specification, narrative resource, software resource, standard specification, web service

Keywords: interoperability, electronic health record, classification tool, dictionary, language translator, classification, terminology, semantic, metathesaurus, vocabulary, thesaurus, natural language processing

Funding: NLM

Availability: License required and only issued to individuals, Not to groups or organizations - no charge for licensing the UMLS from NLM.

Resource Name: Unified Medical Language System

Resource ID: SCR_006363

Alternate IDs: nlx_152104

Record Creation Time: 20220129T080235+0000

Record Last Update: 20260829T182750+0000

Ratings and Alerts

No rating or validation information has been found for Unified Medical Language System.

No alerts have been found for Unified Medical Language System.
