Proper Citation: University of Washington Seattle WA. Pharmacology (RRID:SCR_007539)

Description: The Department of Pharmacology are involved in diverse areas of research with special emphasis on molecular pharmacology, cellular regulation, neuropharmacology, and environmental toxicology. Active areas of research include evaluating the effects of drugs and chemicals on humans and animals; studying the actions of hormones, neurotransmitters, and other physiological regulators on individual cells; examining the detailed molecular structure of cellular constituents; and exploring how the cell regulates it's vital processes through transcriptional and post-transcriptional mechanisms. Through our research, we'd ultimately like to gain detailed insights into drug action and cellular regulation at many different levels of inquiry: the human patient, the experimental animal, the individual cell, its complement of proteins, and the genetic code.
