Proper Citation: Athena (RRID:SCR_008110)

Description: Athena is a web-based application that warehouses disparate datatypes related to the control of gene expression. Athena provides several features to enable exploration of the regulatory mechanisms of Arabidopsis gene control. The first main tool we provide is visualization of promoter domains of selected genes. Database crossreference for these transcription factors is provided as well as a statistical test for enrichment of binding activity within the set of selected promoters. The data mining tools in Athena allow for selection of sets of genes based on two different factors. -Genes can be select by specifying a set of binding factors whose putative sites must be present within all of those genes" promoter regions. -Alternatively, genes can be selected using Gene Ontology annotations. Both GO (Gene Ontology) Slim terms and Gene Ontology terms are available. One can select a set of genes by either choosing a union of the genes annotated by a selected set of Slim terms or Gene Ontology terms. The selected gene"s putative binding factors are listed, including enrichment data. Furthermore, enriched presence of Gene Ontology terms is given. The analysis suite provides both enhanced data mining tools for selecting genes as well as several data displays., THIS RESOURCE IS NO LONGER IN SERVICE. Documented on September 16,2025.

Synonyms: Athena

Resource Type: data or information resource, database

Keywords: gene control, gene expression, arabidopsis, binding factor, regulatory mechanism, ontology, bio.tools, FASEB list

Availability: THIS RESOURCE IS NO LONGER IN SERVICE

Resource Name: Athena

Resource ID: SCR_008110

Alternate IDs: nif-0000-20815, biotools:Athena

Alternate URLs: <https://bio.tools/Athena>

Record Creation Time: 20220129T080245+0000

Record Last Update: 20260829T183017+0000

Ratings and Alerts

No rating or validation information has been found for Athena.

No alerts have been found for Athena.
