Proper Citation: BioIE: Extracting Informative Sentences From the Biomedical Literature (RRID:SCR_013464)

Description: BiolE is a rule-based system that extracts informative sentences relating to protein families, their structures, functions and diseases from the biomedical literature. Based on manual definition of templates and rules, it aims at precise sentence extraction rather than wide recall. After uploading source text or retrieving abstracts from MEDLINE, users can extract sentences based on predefined or user-defined template categories. BiolE also provides a brief insight into the syntactic and semantic context of the source-text by looking at word, N-gram and MeSH-term distributions. Important Applications of BiolE are in, for example, annotation of microarray data and of protein databases.

Synonyms: BiolE

Resource Type: data or information resource, database, software toolkit, software resource

Keywords: family, function, biomedical, context, disease, distribution, literature, medline interfaces, mesh-term, microarray, n-gram, protein, semantic, structure, syntactic
