Proper Citation: Glycemic Reduction Approaches in Diabetes: A Comparative Effectiveness Study (GRADE) (RRID:SCR_014384)

Description: A comparative study that aims to determine which combination of two medications is best for glycemic control in Type 2 Diabetes, has the fewest side effects, and is the most beneficial for overall health. GRADE is a randomized clinical trial of participants diagnosed with type 2 diabetes within the past 10 years who are already on metformin. Participants will be randomly assigned to 1 of 4 commonly-used glucose-lowering drugs (glimepiride, sitagliptin, liraglutide, and basal insulin glargine), plus metformin, and will be followed for up to 7 years.

Abbreviations: GRADE\\t

Synonyms: Glycemic Reduction Approaches in Diabetes: A Comparative Effectiveness Study

Resource Type: data or information resource, data set, resource

Keywords: glycemic reduction, comparative study, type 2 diabetes, clinical trial, randomized, glimepiride, sitagliptin, liraglutide, and basal insulin glargine, metformin

Related Condition: Type 2 diaberes, Diabetes

Funding: NIDDK

Availability: Documents for prospective researchers on ancillary studies are available
