Proper Citation: Montana State University Cryo-EM Core Facility (RRID:SCR_026324)

Description: Core provides single particle analysis and cryo-electron tomography. Instrumentation includes 200 kV Talos Arctica with Gatan K3 camera, 120 kV Tecnai Spirit, and Vitrobot Mark IV allowing imaging of biological structures at single nanometer to sub-nanometer resolutions, and thus enable 3D modeling of cells, viruses, proteins, nucleic acid, and other soft matter at the atomic level.

Synonyms: , Montana State University - Cryo-EM Core Facility

Resource Type: access service resource, core facility, service resource

Keywords: ABRF, single particle analysis, cryo-electron tomography,

Funding: NSF DBI-1828765 10/01/18 - 09/30/22 A Multi-User Cryo-Electron Microscope for the Cellular and Molecular Life Sciences Community in the Northern Rocky Mountain Region Major goals were the purchase ; installation and commissioning of a Talos Arctica 200 kV cryo-electron microscope with a Gatan K3 direct electron detector at Montana State University; MJ Murdock Charitable Trust 01/03/2018 – 07/31/2022 A Multi-User Cryo-Electron Microscope for the Cellular and Molecular Life Sciences Community in the Northern Rocky Mountain Region The major goal of this proposal was to augment the above NSF-MRI funding for the purchase ; installation and commissioning of a Talos Arctica 200 kV cryo-electron microscope with a Gatan K3 direct electron detector at Montana State University; NIH P30GM140963 08/01/2021 – 07/31/2026 University of Montana COBRE ; Biomolecular Structure and Dynamics Provides partial salary support for the MSU cryo-EM Facility Manager.
