Description: Rattus norvegicus with name F344.Cg-Foxn1^{rnu}/Jcl from RGD.

Species: Rattus norvegicus

Notes: This congenic strain was established as a strain with the genetic background of F344/N onto which a segment from the nude rat containing the *Foxn1*^{rnu} was transferred. Originally, hairless mutant (*rnu*) was observed in a colony of outbred hooded rats maintained at the Rowett Research Institute in Scotland. Backcrossing started at Central Institute for Experimental Animals in 1979 and thereafter the subline was transported to CLEA Japan, Inc for production and supply of these rats. [CLEA Japan, Inc](#)
