Description: Caenorhabditis briggsae with name Cbr-prg-1(how21) I. from WB.

Species: Caenorhabditis briggsae

Synonyms: Cbr-prg-1(how21) I.

Notes: C. briggsae strain. Reduced fecundity at 20C and 25C. Generated by CRISPR/Cas9 in AF16 background, prg-1(how21) is a 5 bp deletion located 47 bp downstream of the start codon that causes frameshift. prg-1(how21) is presumed null; consistent with previous findings that the stability of piRNAs and Piwi protein are co-dependent in C. elegans, the overall abundance of 21 U-RNAs in Cbr-prg-1(how21) was reduced to ~1% of wild-type.
